Objectives

• Tonight’s panelists will examine the core technology of blockchain, and provide their perspectives on its implementation and impact along with federal health use cases.

Questions for Today

• What is blockchain and how can we separate the hype from reality?
• What are realistic blockchain-based healthcare use cases? What is the path forward to further adoption?
• How might blockchain enhance patient privacy, data access, and security through public and private keys?
• What are the critical success factors for a successful blockchain implementation?
• Who will create the standards and frameworks for effective governance, and how might that regulation impact the market and blockchain innovators?
Exploring Blockchain Value
